

veris

3D Spatial

Veris believes that the best decisions are made when businesses are completely informed. At Veris we provide all the data and information decision-makers need to give their organisation an advantage.

Veris further strengthened its reputation as the premium provider of 3D laser scanning and 3D Spatial solutions in Australia with the acquisition of Lester Franks in 2016. Lester Franks pioneered the use of 3D laser scanners in Australia for mining, industrial, defence, architecture and heritage, maritime, automotive and aerospace and is also a leader in industrial metrology and underwater data capture.

The experience and expertise of Lester Franks, along with Veris' nation-wide resources and knowledge, are now a part of the Veris 3D Spatial team.

Operating nationally, Veris can offer a combination of latest technologies through:

- 3D Laser Scanners: Mobile and Terrestrial
- UAV/Drones: Fixed Wing and Multi-rotor
- Subsurface: Ground Penetrating Radar (GPR) and Electromagnetic Locating (EML) Sub-surface Scanning equipment
- Hydrographic: Side scan, multi-beam and 3D scanning sonar equipment.
- Industrial Metrology and Dimensional control Laser Trackers and portable measuring arms.

These technologies allow for the efficient capture of information that can ensure continuous operation of your facilities. Health and safety risks are reduced, outputs are accelerated and unrivalled completeness of data is delivered through rapid, non-contact data collection.

DEVELOP WITH CONFIDENCE™

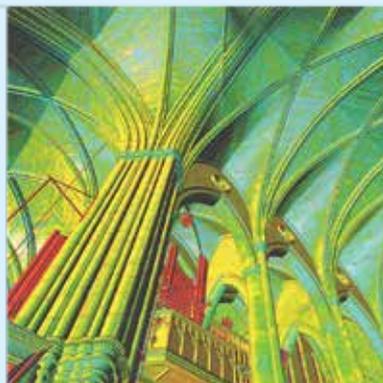

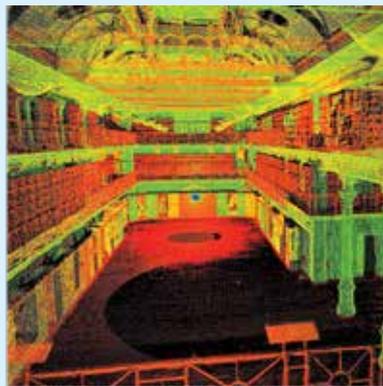

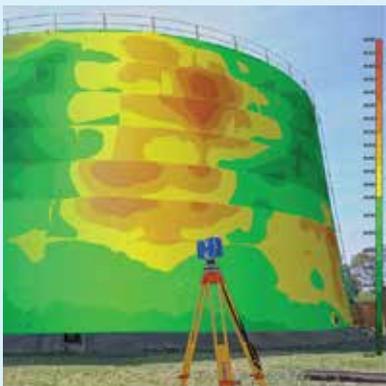

Veris integrates data from all our 3D Spatial technologies to produce seamless three-dimensional deliverables for uses such as:

- Scan to BIM for architectural and plant applications
- Aerial imagery, digital terrain models and volumetric studies
- Reverse engineering and intelligent 3D CAD modelling
- Precision dimensional inspection, alignments and verification
- Underwater mapping and asset monitoring
- Deformation analysis and condition monitoring
- High-end 3D visualisations, panoramic imaging and virtual walkthroughs

Veris can assist in the digital continuity of all data from capture through to 3D modelling, analysis, documentation and visualisation.

Our experience in the 3D Spatial market, combined with our flexible approach, allows us to deliver a high quality innovative solution that can add real value to your supply chain.
