

Civil Construction & Engineering Surveying

Delivering solutions for major infrastructure that keeps Australia moving.

We have a reputation for exacting work. We have a long history of working across all aspects of the building and civil construction industry to ensure the quality, safety and success of a wide range of projects.

The team at Veris specialise in supporting high-end engineering including, railways, tunnels, roads, bridges, buildings, earthworks and customised monitoring projects. Our workplace experience is also significant for major rail projects such as our contracts undertaken for the Taiwan High Speed Rail Project, Trackstar (QLD) and Epping to Chatswood Railway Line (NSW).

From the initial planning stages, through the execution of control, to systems implementation, Veris has the expertise to manage an entire site and ensure accurate and positive outcomes for our clients.

Our Engineering Surveying services include:

Building Construction Surveys

Civil Construction Surveys

Deformation and Monitoring Surveys

Ground Control Surveys

Hydrographic Surveys

Mining Survey Services

Asset Utility Collection and Mapping

Digital Terrain Modelling

Volume and Feature Surveys

Our national team offers clients access to Australia's leading construction and engineering surveying talent, while providing personal service and local expertise.
